MCA DEPARTMENT

Action taken Report

After taking into consideration of the pivotal feedback from different stakeholders such as Employers, Industrial Experts, Alumni, Faculty, and parents, adequate measures have been taken to revamp the list of electives offered, inclusion of new subjects on Open Source Web Technologies, Cloud Computing, advanced .NET and Java Technologies, and Network Security. A paper on Quantitative Aptitude has also been included. Strategies have also been evolved to induct the new disruptive technologies into the syllabus periodically and on the need basis; instead of the linear approach of revising the syllabus once in many years. Steps are mulled over to make the Lab work / Mini-projects compulsory for many subjects, and the use ICT in the teaching learning process by the Faculty so that students receive experiential learning to imbibe new skills sets with enhanced employability.
